Project Design Phase-I
Solution Architecture

Date	21 October 2022
Team ID	PNT2022TMID35124
Project Name	Project – IOT Enabled Smart farming application
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.

- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.

- Provide specifications according to which the solution is defined, managed, and delivered.

**Example - Solution Architecture Diagram:**

Fig :IOT ENABLED SMART FARMING APPLICATION

◆ The different soil parameters (temperature, soil moistures and then humidity)are sensed using different sensors and obtained value is stored in the IBM cloud.

◆ Arduino UNO is used as a processing Unit that process the data obtained from the sensors and whether data from the weather API.

◆ NODE-RED is used as a programming tool to write the hardware, software and APIs. The MQTT protocol is followed for the communication.

◆ All the collected data are provided to the user through a mobile application that was developed using the MIT app inventor. The user could make a decision through an app, weather to water the crop or not depending upon the sensor values. By using the app they can remotely operate to the motor switch.
